Table 1. 2007 Infectious Diseases Society of America/American Thoracic Society Criteria for Defining Severe Community-acquired Pneumonia

Validated definition includes either one major criterion or three or more minor criteria

- Minor criteria**
- Respiratory rate ≥ 30 breaths/min
 - P_{aO_2}/F_{iO_2} ratio ≤ 250
 - Multilobar infiltrates
 - Confusion/disorientation
 - Uremia (blood urea nitrogen level ≥ 20 mg/dl)
 - Leukopenia* (white blood cell count $< 4,000$ cells/ μ l)
 - Thrombocytopenia (platelet count $< 100,000/\mu$ l)
 - Hypothermia (core temperature $< 36^\circ$ C)
 - Hypotension requiring aggressive fluid resuscitation

- Major criteria**
- Septic shock with need for vasopressors
 - Respiratory failure requiring mechanical ventilation

*Due to infection alone (i.e., not chemotherapy induced).

Otherwise, healthy adults between the ages of 18 and 50 do not need to get the vaccine if they are free of other conditions that require the shot as a precautionary measure. Side Effects From the Vaccine: When you receive the vaccine there's the possibility of some side effects, most of them are minor and should be temporary. Trends in antibiotic use and nosocomial pathogens in hospitalized veterans with pneumonia at 128 medical centers, 2006-2010. 2015;61(9):1403-1410. Individual clinicians and institutions will have to determine where the newer agents fit into their local treatment algorithms. Results: The panel addressed 16 specific areas for recommendations spanning questions of diagnostic testing, determination of site of care, selection of initial empiric antibiotic therapy, and subsequent management decisions. It will be hard to catch your breath, and you may have chills and chest pain from coughing. Because it can turn into a serious illness, if you even suspect that you or someone in your family has pneumonia, you should get in to see your doctor. It's recommended that those over 65 years of age should get the immunization according to the Center for Disease Control and Prevention (CDC). Antimicrob Agents Chemother. Those with weakened immune systems should also get the shot. Talk to your physician about the shot if you feel like it's something you should have and the two of you can determine if it's for you. Ceftriaxone was not approved during the previous guideline period. Seventh, withholding empiric antibiotic therapy is not recommended, but early discontinuation can be considered in CAP patients who have test positive for influenza. Finally, the guideline states that newer antibiotics, such as lefamulin and omadacycline, require further data. If you do get pneumonia, however, it should be a much milder case than if you had not had the vaccine and will lessen many of the symptoms. doi: 10.1086/505871Elaaly K, Wali H, Baslim A, et al. Clinicians are encouraged to review and adopt these guidelines in clinical practice.ATS indicates American Thoracic Society; CAP, community-acquired pneumonia; FDA, US Food and Drug Administration; HAP, hospital-acquired pneumonia (CAP) guidelines was recently published by the American Thoracic Society and the Infectious Diseases Society of America.1,2 This article highlights some key updates to the antimicrobial therapy recommendations. First, the term health care-associated pneumonia (HCAP) was introduced in the 2005 guidelines for hospital-acquired pneumonia (HAP) guidelines, and health care-associated pneumonia as it was thought some patients who acquired pneumonia in the community with certain risk factors for multidrug-resistant bacteria (e.g., living in nursing homes) should be treated similarly to patients with nosocomial pneumonia.3-8 In the new guidelines, the term HCAP is clearly eliminated and it is recommended that these patients be treated as CAP patients without covering methicillin-resistant Staphylococcus aureus (MRSA) and Pseudomonas aeruginosa unless they meet criteria for locally validated risk factors for antibiotic-resistant bacteria. Second, the updated guidelines have a number of new culturing and diagnostic recommendations. Fine, SC. In addition to those symptoms you may experience coughing, possibly with either phlegm or tightness in your chest, states WebMD. Lastly, urinary antigen testing for Streptococcus pneumoniae and Legionella is also discouraged. Third, antibiotic choices for outpatients have slightly changed. doi: 10.1093/cid/civ25. Valles J, Martin-Loeches I, Torres A, et al. A new strong recommendation is made for ordering sputum and blood cultures for patients started empirically on anti-MRSA or antipseudomonal antibiotics. Long, Antonio Anzueto, Jan Brozek, Kristina Crothers, Laura A. Those with conditions such as diabetes, COPD or asthma, diabetes and emphysema should all add the pneumonia vaccine to their list of ways to protect their health says the Mayo Clinic. doi: 10.1086/511159. American Thoracic Society; Infectious Diseases Society of America. Waterer, Ann C. The randomized controlled trials for these agents in CAP were published after the guidelines were released, and therefore did not make it into the official recommendations. The guidelines also recommend against the use of routine follow-up x-rays if patients are improving. The role of anaerobes in patients with ventilator-associated pneumonia and aspiration pneumonia: a prospective study. This recommendation can result in more de-escalation when the culture findings are negative for these bacteria. Fever and redness and swelling at the site of the vaccination are all possible. Dean, Michael J. Infect Dis Clin North Am. 2013;27(1):1-18. An infection of the lungs, those with chronic lung disease and other related conditions can become very ill if they get pneumonia. Although some recommendations remain unchanged

from the 2007 guideline, the availability of results from new therapeutic trials and epidemiological investigations led to revised recommendations for empiric treatment strategies and additional management decisions. He is a member of social media committee in both the Society of Infectious Diseases Pharmacists (SIDP) and Infectious Diseases Practice and Research Network of the American College of Clinical Pharmacy, Metlay, Grant W, Metersky, Daniel M. Guidelines for the management of adults with hospital-acquired, ventilator-associated, and healthcare-associated pneumonia. Flanders, Marie R. Int J Antimicrob Agents. Chest, Microbiology of severe aspiration pneumonia in institutionalized elderly. Restrepo, and Cynthia G. doi: 10.1164/rccm.200212-1543OCMarik PE, Careau P, Cooley, Nathan C. Those who drink heavily or smoke should get the pneumonia vaccine. His twitter handle is @khalidelaaly *Elaaly is a member of SIDPReferences:Metlay JP, Waterer GW, Long AC, et al. In conclusion, the updated guidelines have a number of changes compared to its predecessor. Despite lacking atypical coverage, the authors pointed out its documented efficacy and safety in several studies. Clin Infect Dis. Your arm may be a little stiff for a short period following the shot.What Is Pneumonia?Pneumonia is an infection in the lungs. Intensive Care Med. Griffin, Mark L. Whitney; on behalf of the American Thoracic Society and Infectious Diseases Society of America PDF Background: This document provides evidence-based clinical practice guidelines on the management of adult patients with community-acquired pneumonia. Pocket card Millions of people suffer from pneumonia each year in varying degrees. A summary of these changes is provided in the table. doi: 10.1128/AAC.02582-14.Yap V, Datta D, Metersky ML.
